Introduction

BSc. CSIT graduate with a strong foundation in Python, SQL, and Machine Learning. Skilled in data preprocessing, data analysis, database management, and developing practical solutions using Python and SQL. Familiar with supervised and unsupervised learning techniques, RESTful APIs, and working with real-world datasets. Passionate about applying technical knowledge to solve real-world problems and continuously developing skills in AI/ML, Data Engineering, and data-driven technologies.

Education

Central Campus of Technology, Dharan Mar 2022 – Feb 2026
Bachelor of Science in Computer Science & Information Technology

- Relevant Coursework: Data Structures & Algorithms, OOP, Database Management Systems, Software Engineering, Computer Networks

Shree Panchayat Secondary School, Pathari June 2018 – Aug 2021
Higher Secondary Education (+2) in Science

Work Experience

AI/ML Intern | Knowledgeflex Technologies Pvt. Ltd., Bangalore, India Nov 10, 2025 – Feb 15, 2026

- Implemented core Machine Learning algorithms from scratch using pure Python and worked with Supervised Learning models including Linear Regression, Logistic Regression, Decision Tree, and KNN for prediction tasks.
- Applied Unsupervised Learning techniques including PCA for dimensionality reduction and K-Means for clustering; performed statistical analysis (correlation, mean, median, mode, percentiles), data preprocessing, and feature engineering to improve model performance.

Projects

Email Fraud Detection | Python 3, Scikit-learn, NLTK, Streamlit, Pandas [Github: Email Fraud](#)

- A lightweight machine learning project that classifies email and SMS messages as Spam or Not Spam. It uses a custom NLP preprocessing pipeline combined with a TF-IDF vectorizer and a Multinomial Naive Bayes classifier. The model efficiently filters unwanted messages and demonstrates practical application of text processing, feature extraction, and supervised learning.

Currency Converter Chatbot | Python, Flask, Dialogflow, ExchangeRate-API [Github: Currency chatbot](#)

- Developed a conversational currency converter using Dialogflow intents and entities to process natural-language conversion requests. Integrated Flask with ExchangeRate-API for real-time currency conversion and added conversational interactions with Telegram integration.

Netflix Data Analysis using SQL | PostgreSQL, SQL, pgAdmin [Github: Netflix Data Analysis](#)

- Used CTEs, subqueries, aggregate functions, and window functions to perform detailed analysis. Applied RANK(), UNNEST, regex, and LIKE/ILIKE pattern matching for advanced data filtering and transformation.

Movie Recommending System | Python 3, Pandas, Scikit-learn, Streamlit [Github: Movie Recommend](#)

- A simple and interactive Movie Recommendation System that suggests 5 similar movies based on the movie selected by the user. This system uses Cosine Similarity to find similarity between movie vectors and recommend movies with similar characteristics.

Technologies

Programming Languages: Python, C++, C, C#, SQL, JavaScript
Machine Learning: Scikit-learn, Supervised & Unsupervised Learning
Natural Language Processing: NLTK, Text Processing, TF-IDF
Technologies: .NET, Django, Pandas, Git, Postman, RESTful APIs
Databases: PostgreSQL, MySQL, SQLite
